Domčíkův Zpěvník - Android App

This is the android client for my songbook. You can find the web version <u>here</u>. If you want to save yourself the compiling, you can also download the app from <u>Google Play</u>.

Instalation

1. Clone the github repository.

```
git clone git@github.com:tragram/DomcikuvZpevnik.git
```

1. Import it into Android Studio
2. You can set the server api.php in the settings xml file or in the application settings
3. Build and run the app

Possible upgrades

• Better support for ChordPro (autoscroll, transposing)
• Add the possibility for the user to pick any file type, if they so wish

Libraries

• <u>Daimajia's NumberProgressBar</u>
• <u>Android support library</u>
• <u>Bartosz Schiller's Android PDF Viewer</u>
• <u>Java ChordPro Parser</u>

Special thanks

• **Jonáš Kareis:** for helping me create a complete list of all of my songs
• **Šimon Appelt:** for letting me use his hosting and domain
